

Asset Pricing

José Fajardo

Fundação Getulio Vargas

Prf. José Fajardo

- Ph. D in Mathematical Economics (IMPA-Brazil)
- Asset Pricing, Risk Management, Financial Economics and Behavioral Finance
- e-mail: pepefb@gmail.com
- <http://www.josefajardo.com>
- Office 235

You

- Msc and Ph. D students
- Background?

Objective

- Present asset pricing models and related problems
- Understand how market risk and credit risk is quantified by banks and other financial institutions
- Discuss problems related to financial regulation

Course Outline

- 1 Mechanics of Financial markets
- 2 Properties of options, Discrete Time Models: Binomial trees
- 3 Continuous Time Models: The Black-Scholes-Merton model
- 4 Volatility smiles, The Greeks
- 5 Value at risk
- 6 Estimating volatilities and correlations
- 7 Credit derivatives, and Financial Crises
- 8 New Financial Instruments: Pricing, Risk and Regulation
- 9 Term Paper Presentations

Bibliography

“Options, Futures and Other Derivatives ”, John Hull, Pretince Hall (2017), 10th edt

Options, Futures, and Other Derivatives

Assignments

- Assignment 1 : (due Class 3 - 04/24/18)
- Assignment 2: (due Class 6 â 05/22/18)
- Assignment 3 : (due Class 9 â 06/12/18)

Grading

- Assignment 1 (10%)
 - Assignment 2 (15%)
 - Assignment 3 (20%)
 - Term paper (55%)
-
- * Readings and Participation in Class
 - ** Academic Finance Profession

Term Paper

- For most students, the most difficult part of the program is the search for a research topic
- To acquire some experience selecting research topics, a main course requirement is to prepare a proposal for a project concerning issues we discuss in class
- I hope that a set of research ideas will come to you as the course progresses
- At the end of the quarter, you should target writing down and presenting a document containing:

Term Paper

1. One or two pages motivating the idea/research question. You want to identify a question, explain why it is important that we know more about
2. Once you motivate your research question, you need to think about the economics of your inquiry. This would probably take a page or two. For example, what are the tradeoffs involved? Should we expect to verify proposed effects using real world data? What are the exact methods we should use and why?
3. Anticipating the results: Based on priors, what results should be expected? (What if you find something else?) Discussing this should take a few paragraphs.

Term Paper

4. Add a literature review. In this profession, it is important that you recognize (and give due credit to) those who did prior research in the area you want to do your first paper. Do a fair (not aggressive, but still critical) review of the literature in no more than three pages. The emphasis should be on establishing your case that the “void” in the literature is worth pursuing. Try to organize the papers in a compare/contrast format. Like all you do in the paper, use this to motivate the importance of your research question.
5. Take a page or two to discuss implementation issues such as data availability, sample construction, programming needs, replicability, etc.

Term Paper

6. Have some preliminary results in the manuscript. These can be empirical results, simulations/calibrations, or anything that gives me hope that this is more than a bunch of nicesounding paper ideas that will never see the light of day.
7. A final, polished manuscript should be sent to me about one month after the class ends (July 26th).

Questions

- Determinants of Portfolio Heterogeneity
- Impact of Block Chain technologies
- Big Data and Machine Learning in Finance Models
- Climate Changes and Finance
- Political Institutions and Financial Markets
- Finance and Welfare
